CSLB Eliminates Thirty-One Trade Exams For License

As of July 1, the Contractors State License Board is no longer requiring trade examinations for 31 of its 38 license classifications.

Because of the fiscal pinch the State of California is experiencing, some difficult decisions for cutting expenses had to be made in compiling the state's 1982-83 budget. One of the decisions made was to discontinue funding for 31 of the trade examinations given for contractors licenses by the Contractors Board.

The seven trades (or license classifications) in which a trade examination is still required are: General Engineering (A), General Building (B), Electrical (C-10), Warm Air Heating, Ventilating and Air-Conditioning (C-20), Plumbing (C-36), Roofing (C-39), and Swimming Pool (C-53).

During 1981 the Board's Licensing Committee completed an exhaustive study of licensing examination needs. Each trade area being examined was individually reviewed to

assess (1) the percentage of consumer complaints received by the Board (2) the possibility of serious health or safety problems to the public if work was poorly done, and (3) whether other regulatory safeguards were exercised in that trade independently of the Contractors State License Board.

Based on those considerations, the seven trade areas mentioned were identified as those in which the Board felt examination needs were especially critical. It was proposed that trade examinations be continued for those seven trades, and all other trade examinations be discontinued after a new and more relevant law and business examination was created and ready to be administered. It was also stated that the examinations involved would not be eliminated without first holding a public hearing to discuss the issue.

The Legislature subsequently opted to eliminate funding as of July 1, 1982 for the trade

examinations not designated as "critical" in the study. Therefore, lack of funding made the Board's discontinuation of those examinations a necessity.

In addition to the study's considerations as outlined, it should be noted that the seven classifications in which trade examinations will continue account for approximately 70% of all contractors licenses issued by the Board.

It should also be noted that a C-46 (Solar) classification did not exist at the time the study was done. For that reason, funding for

(Continued on pg. 3, col. 1)

SC-44 REPEALED

New Solar Licensing Regulations Go Into Effect

Several changes have recently been made in the Contractors State License Board's licensing requirements for solar contractors.

Solar regulations adopted by the Board late last year were approved by the State's Office of Administrative Law, and became effective May 22. As part of those regulations, the SC-44 supplemental solar license classification was repealed and is no longer being issued.

The SC-44, and its attendant requirement for reporting on solar jobs completed, was originally designed to provide the Board with a temporary means of monitoring and regulating work in the growing solar construction field. It also provided a means of gathering information on the type or types of solar licensing which would be best suited to CSLB and Industry needs. SC-44 reporting over the past 2 1/4 years and suggestions submitted by industry representatives have both contributed to solar licensing changes, including repeal of the SC-44.

Prior to its repeal, the criteria used for obtaining an SC-44 was that an applicant

must already be licensed in one of seven other specific classifications. Although at last count some 25,000 licensees have obtained an SC-44, its elimination will not prevent those licensees from contracting for solar work. Regulations have been amended, or as necessary adopted, by the Board to include solar work in the scope of the license classifications which were a prerequisite for obtaining an SC-44.

License classifications which now include solar installation are: A (General Engineering), B (General Building), C-20 (Warm Air Heating, Ventilating and Air-Conditioning), C-4 (Boiler, Hot Water Heating and Steam Fitting), C-10 (Electrical), C-36 (Plumbing), and C-53 (Swimming Pool).

Although the C-61 (Swimming Pool Maintenance) classification was also originally used as a prerequisite for obtaining a supplemental solar license, solar installation has not been included in the scope of the C-61 classification.

Insulating Materials Directory Published

The first of this year the California Energy Commission began a program to implement their "Regulations for Insulating Material" which requires all insulation material sold or installed in the state to have been certified to conform with the thermal performance testing, safety and other requirements of the regulations.

Since September 22, 1981, all insulation manufacturers have been required to certify that their products have been tested by an approved testing laboratory and are being manufactured and sold to comply with the regulations.

As of January 1, 1982, only certified and properly labeled insulations may be installed within the state. The Commission has published a directory of certified insulation materials and provided it to all California building officials. It is available free of charge to other persons by writing:

California Energy Commission
Publications Unit
1111 Howe Ave.
Sacramento, California 95825

Technical questions concerning the regulations for insulating materials should be directed to Ray Hillier at (916) 924-2275.

Letters to the editor, articles or information of interest to contractors, and suggestions for subject matter in future issues are welcome.

To The Industry:

Reporting to you on the operation of the Board's application investigation unit in the last issue of this newsletter, I stated my belief that we must apply strong measures to reduce and eventually eliminate falsified applications being submitted for contractors licenses.

Some recent developments are an indication of the "strong measures" that are being taken. On May 21, following a five month undercover investigation conducted by CSLB, the Santa Barbara District Attorney's Office filed a lawsuit against Allstate Schools, Inc. It charges the schools with unlawful and deceptive business practices and calls for \$2 million in civil penalties.

A preliminary injunction issued against Allstate on the same date ordered the schools to discontinue misrepresenting certain facts to prospective students and advising or helping students to falsify experience on applications submitted to CSLB for contractors licenses.

Allstate, which has 18 branch offices throughout the State, offers application preparation services and exam study courses for contractors licenses.

The Board's investigation began as a result of a call from the Santa Barbara District Attorney's Office after two students from the school's Santa Barbara branch office filed complaints with the D.A.

During the investigation, the Board's special investigations team were not only given false information regarding major changes which would supposedly soon be made in qualification requirements for a license, but were also encouraged to stretch experience claims to make up the four years now required. School employees actually changed dates and other information necessary to make up the four years on a license application for one investigator who was posing as a student.

A subsequent review of some 8,000 client files, seized by D.A. and CSLB investigators from Allstate's headquarters office in Reseda, indicated that all 18 of the school's offices have been engaged in this type of activity. A criminal investigation is ongoing and it is possible that the Santa Barbara District Attorney's Office may file criminal charges against the schools in the future.

As an interesting sidelight, evidence was found during the review which indicated Allstate had not submitted a number of completed applications to the Board and had informed the applicants that delays were due to Board processing time.

Of most concern to the Contractors State License Board is the fact that significant numbers of contractors licenses may have been issued on the basis of falsified information. Our investigation of contractors licenses already issued to previous Allstate students is continuing. Appropriate actions will be taken, even if that means the suspension or revocation of a large number of licenses.

We have also noted our records so as to be able to identify and thoroughly scrutinize

incoming applications which were pending from Allstate at the time client files were taken.

The requirement that an applicant must have at least four years experience in the trade being applied for provides CSLB with one means of measuring the probable competency of prospective licensees. In my opinion, obtaining a license by falsifying the necessary experience constitutes a crime—not only because of its immediate illegality, but because it defrauds future customers who may rely on the evidence of that license in hiring the contractor.

At present the application investigation unit selects an average of 6% of the applications received by the Board each month for field investigation. As a result of those investigations over 300 applications for license have been denied since July 1981.

Ideally, perhaps, every application for license should be investigated prior to issuance. Realistically, the number of applications we receive each month and available CSLB investigative staff make that an impossibility.

That situation will be further aggravated in the coming year by the elimination of some 40 of the Board's deputy registrar positions in the Governor's 1982-83 budget.

With the loss of that many investigators, it is entirely possible that response time to our normal workload of consumer complaints may increase, and the number of application investigations we initiate may have to be decreased.

An alternative to increased application investigations, and one which I intend to adopt, is to seek the strongest possible legal and/or administrative penalties against applicants or licensees who we find have deliberately falsified their experience records. By doing this perhaps we can provide a deterrent to future unqualified applicants and work toward insuring the quality of those we do license.

**John F. Maloney
Registrar of Contractors**

Exams (Cont. from pg. 1)

creation or administration of a C-46 trade examination was not included in the budget. No decision has yet been made by the Board regarding what examination or qualification requirements will be for obtaining that classification.

In September, 1981, Research Consulting Corporation (RCC) began work to develop a new law and business examination for contractors license.

Over the following eight months RCC consulted contractors in various trades to identify the business and legal aspects of the job a beginning contractor needs to know in order to succeed. From their responses RCC determined what content areas the test should cover, and what percentage of the test each area should comprise. The general areas were: Money Management (about 28%), Employee Relations (about 26%) and Contracts and Contract Disputes (about 46%).

RCC has developed over 200 multiple choice questions in these areas which will be used as a pool from which test questions will be drawn. The questions will be rotated monthly so that the examination will be different each time it is administered. Over the next year additional questions will be developed to add to the pool.

The Licensing Committee has reviewed the questions for accuracy, relevance and clarity. Although an exact date when the new test will first be administered is not set, it appears that it will be in the fall.

At approximately the same time, a new Business Management For Contractors booklet will be available for distribution by CSLB. It will be sent to prospective examinees, and should be a helpful study guide in preparing for the new law and business examination. In addition, the following study materials are recommended:

Harold Squire—*Managing A Contracting Business*—Columbus, Ohio: Squire and Associates, 1977.

Gibbs, Kenneth, Et Al—*California Construction Law Handbook*—Wisconsin: Professional Education Systems, 1981.

These books may be available in local public or community college libraries. If not, the libraries may be willing to order copies. In addition, a handy pamphlet is available from the California Employment Development Department, titled *1982 Employers Guide* (Unemployment Insurance Code of California).

The California Contractors License Law and Reference Book continues to be an important study source for prospective examinees. It can be ordered by sending an order with \$7.05, plus \$1.50 for UPS delivery to:

General Services
Office of Procurement
P.O. Box 1015
North Highlands, California 95660

The law and business examination will continue to be required of all new applicants for contractors license regardless of the trade being applied for. However, once the law and

PRIMES VS SUBS

Contractor's Board Takes a New Look At Responsibility in Disciplinary Actions

by Warren McNely, Board Member

A clarification of the Contractors State License Board's policy regarding the responsibility of prime contractors versus subcontractors in disciplinary proceedings has been adopted by its Enforcement Committee.

Although at this writing the policy clarification has not yet been adopted by the full Board, it will be voted on in its July 22-23 meeting and few, if any, changes are expected to be made.

Information referred to the Enforcement Committee by both industry sources and Board deputies has indicated that inequities may have occurred in the Board's handling of complaints which involved both prime and subcontractors. For example, some district offices have taken the position that in cases in which a prime contractor and subcontractor are involved, disciplinary action will be taken only against the prime unless the cause of the complaint is first corrected.

As a result of this information the Committee has held a series of public meetings during the past year to review the Board's present enforcement policy in these cases, and as necessary to outline or clarify policies to be used in the future.

Frequently, when a complaint is filed with the Board it involves several parties and alleges several possible violations of the contractors law.

It is the duty of the Registrar, through his Deputy Registrars, to investigate the complaint and to determine what, if any, violations have occurred and what disciplinary action is appropriate. Once an investigation is undertaken by a deputy registrar, the contractor against whom the complaint has been filed has the opportunity to refute it or give necessary explanations.

If there are only two parties to a dispute, the owner and the contractor, the task of the deputy calls for an assessment of the facts of the case. Is the complaint valid? Has the contractor violated the law? What disciplinary action would be appropriate? Answering those questions is not necessarily easy, but at least the parties to the dispute are easily identified.

Complications arise, however, when other parties to the dispute are involved—for exam-

business examination has been successfully taken by an applicant/licensee (whether it is the old or new version), it will not have to be retaken when applying for additional license classifications.

Plans for 1982-83 include significant improvement of the trade examinations in the seven "critical" trades. As each examination is revised, the Contractors State License Board should have study guide information available for people preparing to take it.

ple, a prime contractor and one or more subcontractors. Advised that a complaint has been filed, the response of the prime may be that all of his/her work was done properly, but that one of the subcontractors is guilty of the violation. Given this argument, the deputy must determine not only the facts of the case, but also against whom any action is to be taken.

Obviously the Contractors State License Board is not equipped to adjudicate the disputes that can and do arise between prime and subcontractors. Further, the prime contractor has assumed the responsibility for the full performance of the contract whether or not a subcontractor is employed to do some or all of the work.

In spite of those facts, the policy clarification adopted by the Enforcement Committee states that *there are certain circumstances where it would be equitable for the Contract-*

(Continued on pg. 4, col. 2)

Dr. Hostler Appointed To Contractors Board

Dr. Hostler (right) being sworn into office by Vice-Chairman John Lazzara.

Dr. Charles Hostler was appointed by Governor Brown to the Contractors State License Board on February 25.

Hostler, who previously served as a board member for six years ending in 1979, resides in San Diego and is president of Hostler Investment Company. He holds masters degrees in international affairs and middle eastern studies, as well as a doctorate in political science and economics. He is a retired colonel from the U.S. Air Force. Prior to founding his own company he was involved in international activities for McDonnell Douglas Corporation.

Hostler's appointment brings the Board to a full complement of 7 public, 1 labor and 5 contractor members.

Commonly Asked Questions About RMEs and RMOs

Q. What is the difference between an RME and an RMO?

A. Either a responsible managing employee (RME) or a responsible managing officer (RMO) is an individual other than a firm's owner or partner who qualifies for a contractor's license. An RME is an *employee* who qualifies the license of his/her employer. The employer may be an individual, a partnership or a corporation.

An RMO is a *corporate officer* of a particular corporation who qualifies that corporation for a contractor's license.

Q. How do I qualify as an RME or RMO?

A. You have to meet the same requirements an individual must meet to obtain a license. You must have four years experience (out of the last ten) at a journeyman level or higher in the trade you are applying for. You must also successfully pass an examination for that license classification.

If you have already qualified in the same classification on another license, and that license has been in effect anytime during the previous five years, your experience will not have to be verified again nor must the examination be retaken.

Q. If I have my own individual license and want to qualify as an RME or RMO for another company, can that company use my license?

A. No. The new company must submit a new application for a contractor's license with you as the qualifying person (RME or RMO). A separate license number will be issued for the new company.

If you will be replacing a previous RME or RMO on an existing license, an application for Change of RME/RMO will have to be submitted to the Board.

Q. If I successfully take the examination to qualify as an RME or RMO for a company, does the license issued belong to me?

A. No. The license will be issued to the company for which you are qualifying. Although you will not have to retake the examination unless you want a different license classification, you will have to submit another application to obtain your own license.

Q. Can I be the RME or RMO on more than one license?

A. There may be exceptions in some unusual licensing situations, but the following rules apply in most cases:

You may qualify as the *Responsible Managing Officer (RMO)* for one corporation license, and hold an active individual license at the same time, if you own at least 20% of the corporation you wish to qualify.

If you do not own at least 20%, you will have to inactivate your individual license to qualify as the RMO.

You may qualify as the RMO of *more than one* corporation and retain your own active license if you yourself own at least 20% of *each* corporation. You may also qualify for more than one corporation if you do not own

20% but the majority of the officers listed on the corporate licenses are the same, or there is a 20% *common ownership* between the corporations (i.e., some officer other than yourself, who is listed on both licenses, owns at least 20% of each corporation). *However, to qualify under either of the last two conditions you would first have to inactivate your individual license.*

You may qualify as the *Responsible Managing Employee (RME)* for one corporation, individual or partnership license, but to do so you must inactivate your individual license. With few exceptions, even if your individual license is inactive, you will be precluded from being an RME on more than one license. The reason for this is that an RME (1) must be permanently employed by the contracting business he/she is qualifying the license for (2) must be working for the firm at least 32 hours per week, and (3) must be actively engaged in its management at least half of the total hours per week it is in operation.

Q. Is it possible to be an RMO and an RME at the same time?

A. Rarely. One possible exception would be

if you were the RME for one corporation and a second corporation was formed in which at least 20% of the equity was owned by the first corporation. If you were an officer of the second corporation, you might be allowed to qualify as the RMO for its license.

Q. As an RME or an RMO on a license, how responsible am I if problems occur?

A. You are responsible for direct supervision and control of the licensee's contracting operations. Any grounds for suspension or revocation of that license are also grounds for suspension or revocation of your own license.

If you do not have an individual license and the license you are qualifying is revoked, you can be prevented from applying for your own license, or as the RME or RMO for another licensee, for one year. A suspension of the license can also apply to your individual license and any disciplinary bond required for reinstatement of the license can also be imposed on your license or on any other license for which you hope to qualify. In other words **YOU ARE AS RESPONSIBLE AS THE LICENSEE.**

Primes vs Subs (Cont. from pg. 3)

tors State License Board to proceed against a subcontractor as well as (or in lieu of) the prime.

Sample situations and appropriate actions outlined in the policy clarification follow:

Case I—Where the owner files a complaint against the prime contractor and the prime remedies the violation of the law, the prime becomes the party suffering material injury. The prime may file a complaint against his/her subcontractor. Presuming the violation has been remedied, the Deputy Registrar would then consider taking action against the subcontractor rather than the prime.

Case II—Where the owner files a complaint against the prime contractor and the prime is unable to remedy the violation, the Deputy Registrar would investigate the complaint considering action against the prime, the subcontractor, or both parties. In the event the Deputy Registrar's investigation determines that the violation of the law is clearly that of the subcontractor rather than the prime,

he/she would take action against the subcontractor rather than the prime.

Case III—Where the prime contractor files a complaint against a subcontractor and the owner has not filed a complaint, the Deputy Registrar would investigate for violations with the prime serving as the complainant according to standard complaint procedures.

Case IV—Where the subcontractor files a complaint against the prime contractor, and the owner has not filed a complaint, the Deputy Registrar would investigate for violations with the subcontractor serving as the complainant according to standard complaint procedures.

In summary, the prime must remember that it is first and foremost his/her responsibility to make sure that the terms of the contract are carried out, whether it is done personally or by a subcontractor. However, in certain circumstances, the Contractors State License Board could look to the subcontractor as well as the prime.

At the Contractors State License Board's April 22 meeting Vice-Chairman, John Lazzara, presented Board Member, Tony DiAngelo (left) with a commendation from the Legislature for his assistance in formulating Assembly Bill 1363. The bill, which became effective January 1, 1980, made major changes in contractors license law. Lazzara also presented a certificate of appreciation to Deputy Attorney General, Joe Barkett, for his efforts on behalf of CSLB over the past two years. Barkett retired from state service in May to enter private practice.

SMALL CLAIMS COURT— How To Use It To Your Best Advantage

by Samuel Abdulaziz, Attorney at Law

Attorneys are frequently asked what to do with respect to claims in the amount of \$1,500 to \$2,500. Some of these claims may be against a person who is "well off" financially (in which case the claim should be collectable). Others involve claims in which the debtor may be a "deadbeat." The procedure outlined below can be utilized in both instances.

Our office normally suggests that you take claims in this amount to Small Claims Court. A court date can be obtained very quickly and the cost is nominal. Neither you nor the debtor are allowed representation by an attorney, therefore, you are on equal footing. Small Claims jurisdiction has been increased from \$750 to \$1,500 as of January 1, 1982. Although you may not sue for more than \$1,500, and you cannot foreclose on mechanics' liens, our office believes that you are financially much better off to consider giving up the lien claim and any small amount over \$1,500.

Due to today's inflationary economy, it is expensive to file suit and proceed to trial through the offices of an attorney. In some cases it may take years to get to trial. On the other hand, Small Claims is quick and much less costly.

The process is begun by filing a claim with the Small Claims Clerk. Our experience has shown them to be very helpful in advising and answering questions. This same clerk will give you a trial date and a copy of your claim to

serve on the defendant. Although you are not permitted to effect service, any of your adult friends can serve the defendant. However, we suggest that you take the papers to the marshal or sheriff to assure that the papers are being served in a lawful manner.

When attending the court trial, you should be sure to have all pertinent papers handy—with at least an original and one copy of each. Small Claims Courts are very busy and do not have time to look through unorganized piles of papers! Be prepared to tell your story briefly and accurately. One good idea is to rehearse your "story" in as close to chronological order as possible. Small Claims Judges appreciate your saving the court time, and tend to look at those who do so with favor.

When you have succeeded in Small Claims Court by obtaining a judgement against your defendant, you can go to the Clerk's office and have a Writ of Execution issued. The Writ of Execution directs the sheriff or marshal to "attach" property that might be standing in the name of the judgement debtor.

If you do not know of any assets belonging to the debtor, you can get a Summons issued to bring him/her back to court for questioning. This questioning, called judgement debtor proceedings, is designed to allow you to ask about what assets the debtor may have that are available for execution.

If your debtor does not have any assets with which to satisfy your judgement, you should

go to the clerk and ask that an Abstract of Judgement be issued. You should then take the Abstract of Judgement and have it recorded in any county where the debtor is likely to own property. An Abstract of Judgement just lets everyone in the county know that this debtor owes you money, and how much. It immediately attaches to any property (real property) which might be standing in the name of the debtor in the county where the Abstract is recorded. So . . . if your debtor has any property, the Abstract will immediately attach to it, and if he/she should attempt to sell it, it will become a lien on the property and the judgement debtor will be obligated to pay you from the proceeds of that sale.

If your debtor does not have any property in the county, you should *still* record the Abstract. Judgement is good for ten years, therefore, if your debtor intends to buy property in the future, it will automatically attach immediately upon his/her purchasing the property and become a lien upon it.

The entire procedure as explained should cost no more than \$50.00 including filing fees, process servers' fees, etc. This is significantly less than it would be to utilize the services of an attorney. *However, if you have a claim involving a significant amount of money, we suggest that you do utilize the services of an attorney who is familiar with construction claims.*

DISCIPLINARY ACTIONS DO NOT INCLUDE LICENSES SUSPENDED FOR FAILURE TO MAINTAIN REQUIRED BONDS

The following explanation may be helpful to those persons interested in the causes of disciplinary action indicated by sections violated in the table of Disciplinary Actions:

7071.11	Judgment or admitted claim against bond.	7112	Misrepresentation of a material fact on an application.	7122	Participation of licensee in violating Contractors Law.
7097	Suspension of additional licenses.	7113	Failure to complete a project for the price stated in the contract.	7122.5	Responsibility of Qualifying Person for acts committed by his principal.
7098	Revocation of additional licenses.	7113.5	Avoiding or settling for less than lawful obligations as a contractor through the various bankruptcy proceedings.	7123	Conviction of a Felony in connection with construction activities.
7107	Abandonment of a project without legal excuse.	7114	Aiding and abetting an unlicensed person.	7124	A plea of nolo contendere is considered a conviction.
7108	Diverted funds or property received for a specific job to other purposes.	7115	Failure to comply with the Contractors Law.	7154	Employment of unregistered home improvement salesman.
7109	Willfully disregarded plans and specifications, or has failed to complete the job in a good and workmanlike manner.	7116	Committing a willful or fraudulent act as a contractor.	7155	Participation in violation by a home improvement salesman.
7109.5	Violation of Safety Laws resulting in death or serious injury.	7117	Acting as a contractor out of namestyle.	7157	Model Home, kickback prohibition.
7110	Willful disregard and violation of building laws.	7117.5	Contracting with inactive license.	7159	Failure to comply with contract requirements.
7110.1	Violation of Section 206.5 of the Labor Code.	7118	Contracting with unlicensed person.	7161	False advertising.
7111	Failure to keep records and to make them available to a representative of the registrar.	7119	Failure to prosecute a job with diligence.		
		7120	Failure to pay for materials or services.		
		7121	Prohibition against associating with suspended or revoked licensees.

Solar Licensing (Cont. from pg. 1)

Swimming pool maintenance contractors are limited to the repair of active solar heating systems for swimming pools. However, C-61 contractors currently holding a SC-44 supplemental solar classification may continue to do solar installation work authorized by the SC-44 until one year after CSLB begins issuing a new solar license classification (C-46) adopted by the Board. After that year, C-61 contractors who want to install solar equipment for pools will be required to obtain a C-46, a C-53 or an A license.

No C-46 licenses are being issued at present.

The Board has allowed until January 1, 1983 to provide time for development of necessary experience and/or examination requirements before beginning issuance.

A solar contractor, as described in the regulation outlining the new classification, is "a specialty contractor whose contracting business is the execution of contracts or subcontracts requiring that specific art, ability, experience, knowledge, science and skill in installing, modifying, maintaining, and repairing active solar energy systems." Contracting for any or all of the various types of active solar energy systems is included in the scope of the C-46 classification.

Changes made in the seven license classifications previously mentioned only allow contractors holding those classifications to undertake solar work within the scope of their particular license.

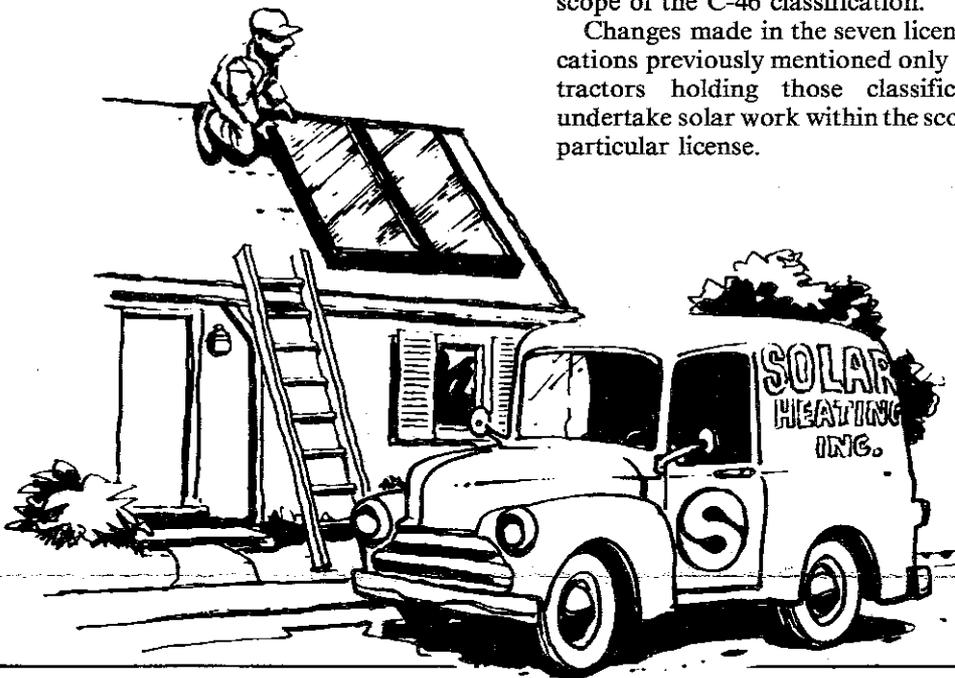

For example, a plumbing contractor may install solar equipment necessary to supply and heat water for maintenance of sanitary conditions in swimming pools and residential, commercial or agricultural buildings; a swimming pool contractor may install solar swimming pool heating equipment; and, a warm air heating, ventilating, and air-conditioning contractor may install systems for those three purposes which either totally or in part utilize solar energy.

After issuance of the C-46 classification is begun, any contractor who wants to do solar work outside the scope of the license classifications he/she holds will have to apply for either a C-46, or other license classification/s which include specific types of solar work.

The installation of any type of active solar energy system has been included in the scope of work authorized for a B (General Building) contractor by the Board's determination that an active solar energy system constitutes use of more than two unrelated building trades or crafts. Part of the legal definition of the general building license classification is that work contracted for must include more than two unrelated building trades or crafts.

Prior to issuance of the C-46, contractors who want to install active solar energy systems that encompass the scope of work included in several license classifications may wish instead to apply for a general building classification.

Development of qualification requirements for the C-46 classification are underway, but no specific date has been set for beginning issuance.
