

# CALIFORNIA LICENSED CONTRACTOR

STEPHEN P. SANDS, Registrar | ARNOLD SCHWARZENEGGER, Governor

*Pictured above is one of the many utility trucks believed to be used by George Stanley.*

## Transient Operators on the Prowl

CSLB's Statewide Investigative Fraud Team (SWIFT) has been coming into contact with increased numbers of transient scammers this year. Historically, they become active in California during fair-weather months, selling bogus paving and home improvement services. There now seems to be a year-round presence.

One group, led by 28-year-old George Stanley, was first cited in Yuba City for contracting without a license on April 16, 2008, and his equipment was impounded. The Moosup, Connecticut resident was again arrested at

CSLB headquarters in Sacramento May 14 on warrants from Tulare County for criminal fraud. Additional cases in San Joaquin, Solano, Napa, Santa Clara, Monterey, Ventura, Los Angeles, and Imperial Counties are also under investigation. There is a court injunction in place to stop Stanley from working in California. CSLB investigators are also working with authorities in other states, including Idaho, where Stanley was arrested twice over a four-day period in mid-June.

SEE OPERATORS PAGE 6

## CSLB Helps Protect Wildfire Victims

Fire season is off to an early start in California this year. On May 30, CSLB investigators joined with partners from the Department of Insurance (DOI) and the Corralitos Fire Department to patrol the burned out neighborhoods of Corralitos in the Santa Cruz Mountains. CSLB also met with fire victims at a Local Assistance Center set up by the Governor's Office of Emergency Services. About 30 homes were destroyed in the fire. The teams spoke with a number of property owners to warn them about the dangers of unlicensed contractors and insurance

adjusters. CSLB signs were posted in the burn zone, warning that it is a felony to contract without a license in a disaster area.

CSLB takes a proactive approach to disasters, quickly going into stricken neighborhoods and speaking to victims. This technique has had a positive effect on keeping illegal operators from preying on property owners.

Early outreach sent a strong message during last year's fire season. CSLB did not receive a single complaint from victims of either the Angora Fire near South Lake Tahoe, or the various Southern California wildfires. ■

*CSLB Enforcement representatives post signs throughout burn areas reminding consumers to "Look for the License" and warning unlicensed operators that working in a declared disaster area without a license is a felony.*

## Registrar adopts CSLB's First "Precedent Decision"

In July 2004, the CSLB set up a sting operation to catch unlicensed individuals involved in swimming pool construction for home owners who act as "owner-builders."

One of the unlicensed contractors caught in the sting, Shawn Sage, was cited for contracting without a license (\$2,000 civil penalty). At his appeal hearing, Mr. Sage argued that he was

SEE DECISION PAGE 10

## CSLB Investigation of Swimming Pool Company Leads to Legal Actions

One of CSLB's most extensive investigations ever has resulted in the arrest of a couple responsible for managing a Sacramento swimming pool company and its day-to-day operations. Gregory and Teresa Wolfe were arrested on May 20, 2008, and face 11 felony charges of mishandling company finances, defrauding consumers and subcontractors, and willfully filing false income tax returns.

www.cslb.ca.gov

Significant accomplishments were achieved during the 2007-08 fiscal year and, maintaining that momentum, we now turn our attention to the goals and priorities we've set for CSLB's coming year.

Among the noteworthy successes during the past year were completing installation of a new, state-of-the-art testing system in all CSLB test centers; reducing the wait time for callers to the CSLB's Licensing Information Center; improving and expanding partnerships with other agencies, including District Attorney offices, to benefit work done by CSLB's Enforcement Division; partnering with more building officials and expanding awareness of the need for more focus

on owner-builder contractor issues; expanding CSLB's visibility in the media, including a documentary on MSNBC and live appearances on NBC's Today Show; conducting timely and effective emergency response operations, particularly for the Lake Tahoe and Southern California wildfires; and creating more integrated and accessible online Web tools.

Moving ahead, the Board has identified its strategic direction with the following goals to help advance CSLB, meet challenges, and capitalize on opportunities:

- Educate consumer base by equipping consumers with informational tools and increased awareness of risks and benefits inherent in construction and home improvement
- Improve awareness of CSLB with consumers, contractors, agencies and legislators
- Advance licensing program through technology, staffing and accessibility
- Support and strengthen the skilled contractor force through education
- Prepare for future CSLB workforce through recruitment and staff development
- Expand enforcement partnerships

I'm proud to have been re-elected by the Board to serve another year as Chair. I'd also like to congratulate the Board's two new officers: Vice Chair Cynthia Mitchell, and Secretary Eddie Barnes. We're excited to get to work on the challenges that face the Board and construction industry, and we welcome your input and continued support of the Board's efforts.

James Miller  
CSLB CHAIRMAN

### Matich Receives Contractor Achievement Award

CSLB Board Member Stephen Matich has been awarded highest honors by the Associated General Contractors (AGC) of California. Mr. Matich was presented the 2008 Contractor Achievement Award during AGC's annual gathering in San Francisco. President of the family-owned Matich Corporation since 1992, Matich has served in a variety of positions within the company since 1980, when he started as a field engineer. He is the third generation sharing in the management of Matich Corporation and has been actively involved in the construction industry for many years. In addition to his many contributions to AGC's committees and boards, Matich is a member of the Asphalt Pavement Association, American Concrete Pavement Association and the Desert Contractor Association. He is also actively involved in his local community and is considered a leader in the Inland Empire area through his work with community boards, charity funds and youth groups. He has served on the Contractors State License Board since 2006. 🏠

## BOARD BRIEFS

### CSLB Welcomes New Board Members

Three new members have been appointed in recent months to the Contractors State License Board.

**Joan Hancock**, of Sacramento, was appointed by Governor Arnold Schwarzenegger to the CSLB as a General Contractor "B" member in November 14, 2007.

Since 1983, Ms. Hancock has owned Her Land Enterprises, a general contracting firm. She previously co-owned Hancock & Colyer Construction from 1977 to 1983. Prior to that, she served as a law clerk for the Sacramento County Public Defender's Office from 1980 to 1982. Ms. Hancock is also a member of the Sacramento Mediation Center. Her term runs through June 1, 2011.

**Lisa Miller-Strunk**, of Aliso Viejo, was appointed by Governor Schwarzenegger to the CSLB as a General Engineering contractor "A" member on

November 28, 2007. Since 1991, Ms. Miller-Strunk has served as president of Shellmaker Incorporated, a marine contractor. From 1988 to 1991, she served as an accounting clerk for Waterfront Enterprises and held the same position for Salvatore's Restaurant from 1988 to 1989. From 1987 to 1988 she was general manager for S.E.A. Constructors. Ms. Miller-Strunk's term expires on June 1, 2010.

**Bruce Rust**, of Clovis, was appointed by Assembly Speaker Fabian Núñez to the CSLB as a public member on April 2, 2008. Mr. Rust is Business Manager

of Laborers Local #294 in Fresno. He has worked in construction in California and Arizona, and as a tunnel miner, helping build the Metro Subway System in Washington, D.C.

### Martin Anthony Match Industry Giant, Former CSLB Board Member Remembered

Hundreds of highway, airport, flood-control, and military construction projects throughout California stand as a monument to Martin Anthony Match, of the Match Corporation. The industry giant responsible for many of the major construction projects in the state died April 19, 2008, at his San Bernardino home.

Mr. Match became president of Match Construction in 1950 upon the death of his father, John Match, who founded the company in 1918. Tradition runs strong in the family and family business. Martin Match, who

was a CSLB Board Member in the 1960s, was the father of current Board Member Stephen Match.

Martin Match, 80, will also be remembered for his tireless devotion to community, and for his leadership in professional, religious, and civic organizations. The highway between Redlands and Fontana was named the Martin A. Match Highway on October 17, 2006, in honor of his lifetime of service. The shadow of this industry giant reaches across the entire state. Read more about Martin Anthony Match at: <http://www.legacy.com/PE/Obituaries.asp?Page=LifeStory&PersonId=108148269>

### Upcoming 2008 Board Meetings

September 10, 2008 • Sacramento

November 20, 2008 • Los Angeles

### CSLB Recognizes Outgoing Board Members

**John O'Rourke**, of Novato, was appointed by Assembly Speaker Núñez in December 2004. Mr. O'Rourke is Business Manager/ Financial Secretary for the International

Brotherhood of Electrical Workers (IBEW) Local 6 and has served in that position since 1999. He served as a Board member two separate times.

**Don Zampa**, of Benicia, was appointed by Governor Schwarzenegger in February 2005. Mr. Zampa is the General Organizer for the Iron Workers

International Union. From 1978 to 2006 he served as the Business Manager for the Iron Workers Union Local 378. Mr. Zampa also served as a Board officer, most recently as Vice Chair.

The CSLB thanks these two outgoing members for their service and dedication to the people of California and the construction industry.

# Know the Rules of Advertising

The CSLB’s Enforcement Division has formed a new unit to investigate advertising violations by contractors. The biggest violation is licensees who don’t include their license number on ads.

Informants are encouraged to send the CSLB business cards, mailers, flyers, or other printed material that are believed to be illegal ads, as well as photos of vehicles displaying suspected illegal ads or business information.

Initially, investigators will contact those who are advertising illegally and issue a violation notice or administrative citation.

CSLB investigators will continue to use illegal ads to target unlicensed operators for undercover sting operations.

## Help CSLB Catch Unlicensed Operators

The CSLB urges licensees to alert us about unlicensed operators. Unfortunately, since it’s difficult to catch these operators in the act, the majority of leads don’t result in a formal administrative action.

To help us build a case against illegal operators, informants are encouraged to provide CSLB investigators with any or all of the following information:

- Business card
- The name of the unlicensed operator, and/or employee(s)
- Photographs of the job site
- Photographs of the work vehicles, specifically the license plate and any business name style
- Work performed and the approximate length of time the construction will be active
- Top priority will be given to cases involving elder abuse, health and safety concerns, workers’ compensation violations, wanted individuals, and repeat offenders. 🏠

# New Regulations Adopted for Lead Paint Exposure

The state and federal government recently adopted new regulations for renovation, remodeling, and painting activities in older buildings. These new rules are intended to protect contractors and families from possible exposure to lead-based paint.

Although lead-based paint was banned in 1978, much of it remains in older buildings. In most structures, the lead-based paint is covered by several layers of non-lead-based paint. This generally doesn’t pose a health hazard, as long as the lead paint is kept in good condition and is not disturbed.

However, demolition and other remodeling activities can disturb lead-based paint, creating leaded dust that can poison workers and children. Prolonged lead exposure can result in learning disabilities, hearing problems, headaches, nausea, vomiting, abdominal pain, and seizures.

California regulations require individuals who disturb paint in any structure built before January 1, 1978, to use “lead-safe” work practices and clean the work area after the project is completed. These requirements became effective April 30, 2008, and apply to everyone—contractors, painters, homeowners, renters, maintenance staff, etc. Violations of these lead-safe requirements can result in a \$1,000 fine.

Beginning in 2010, the U.S. Environmental Protection Agency (USEPA) will require that at least one contractor (per job) working on a pre-1978 residential building or child-care facility become “certified” by taking an 8-hour class on lead-safe work practices. Under the rule, these contractors will have to renew certification every five years by completing a 4-hour refresher course.

In addition, businesses that conduct renovation, remodeling, and painting will also be required to become certified by USEPA. These businesses will be required to submit a 1-page application form (and fee) stating that the business and its employees will comply with the lead-safe requirements. Upon receipt, USEPA will recognize the business as a certified firm. 🏠

## Arbitration

You just received a letter from CSLB that a complaint has been filed against your license and arbitration is being provided as the resolution. Congratulations!

Your case has been determined as eligible for this unique and very fair program that's paid for by the CSLB. Arbitration is an efficient resolution tool if the dispute is about non-licensing issues, such as workmanship, the contract terms, change orders (or lack thereof), and if there are no violations or disciplinary actions required.

Complaints that meet specific criteria and include a potential financial injury of \$12,500 or less may be referred to mandatory arbitration at the complainant's request. Complaints that meet this same criteria and include a potential financial injury that is between \$12,500 and \$50,000 may be referred to voluntary arbitration if both parties (the complainant and the contractor) are willing to resolve the dispute within this forum.

So, what is arbitration anyway? The complainant (typically a homeowner or, in some instances, another contractor) and yourself will present your case before a neutral arbitrator who is knowledgeable in the trades. You will receive a hearing notice from the administrative agency, the Arbitration Mediation and Conciliation Center, which will provide for a time and place for the hearing. At this assigned time, both the complainant and you will have the chance to present your side of the story to the arbitrator, who will then render a decision that will serve as the final outcome of the dispute.

Is it really that easy? Yes... and no. Both the complainant and contractor have to prove their case. In other words, you must present evidence for your side of the story, such as cancelled checks, contracts, change orders, phone records, reports and any other information that will help the arbitrator get a clear view of what happened on the project. Also, the arbitrator will consider any outstanding contract balance or bond payments, so be sure to have that information as well. Remember, whatever the arbitrator decides will be final. There is no appeal process, so it is very important that you be prepared and bring everything to the hearing.

What does an Arbitration Award mean for your license? If you are required to pay the complainant, and do so within thirty (30) days, then the complaint is **not** disclosed on your license. But, be careful; if you are required to pay and do not within ninety (90) days, your license can be revoked. However, you might prevail in the arbitration and the complainant may owe you money, which may be confirmed in court as a judgment.

Arbitration may be the best solution to a dispute with a complainant. You are given the opportunity to tell your side of the story and be heard by an arbitrator that knows the building industry and the trades. You may or may not win, but the process is fair to both sides and the outcome will be equitable. So, if you are given the opportunity to arbitrate your dispute, congratulations!

More information about the arbitration program is available at [www.cslb.ca.gov](http://www.cslb.ca.gov) or [www.AMCCenter.com](http://www.AMCCenter.com). 🏠

## Testing Division Update

A major expansion project that will nearly double the number of seats available at the CSLB's eight testing centers is nearing completion. Expansion began in 2005. When the project wraps up in 2010, the total number of test seats will increase from 142 in 2005 to 264. The most recent expansion was completed in March when capacity at the San Bernardino Test Center was increased from 14 to 45 seats. Two project locations remain: San Diego and Fresno. Test Center exams are given five days a week. 🏠

| Test Site       | 2005 Seating | 2009 Seating |
|-----------------|--------------|--------------|
| Sacramento*     | 23           | 32           |
| Oxnard*         | 18           | 33           |
| San Jose*       | 7            | 25           |
| Norwalk*        | 27           | 59           |
| San Bernardino* | 14           | 45           |
| Oakland*        | 22           | 22           |
| San Diego       | 16           | 23           |
| Fresno          | 15           | 25           |
| <b>TOTAL</b>    | <b>142</b>   | <b>264</b>   |

\* PROJECTS ALREADY COMPLETED

## Construction Workers Displaced by Housing Slump Eligible for Retraining

Residential construction workers and others who have been laid off as a result of the housing slump will get help through nearly \$4.5 million in state employment retraining program grants announced on May 29, 2008, by the Labor and Workforce Development Agency's Employment Development Department (EDD).

The grants are being awarded to cities and organizations that provide employment and training services for out-of-work individuals, especially those in areas hard hit by the downturn in residential housing.

The grant awardees will provide "bridge" training programs that focus on moving workers laid off from residential construction into jobs requiring similar skills in commercial construction and public works projects, many financed by the \$42 billion

in infrastructure bonds approved by voters last year.

According to EDD, approximately 59,000 jobs were lost in California in the construction industry from December 2006 to December 2007. Most of the job losses were concentrated in the residential housing sector.

In addition to the grants, \$5 million in funding through the Employment Training Panel will be directed to retrain workers in the residential construction sector. This more specialized training will refine existing workers' skills to job-specific requirements of a new employer, or assist in more significant retraining to move unemployed workers into new industry sectors or occupations.

Learn more at [www.edd.ca.gov](http://www.edd.ca.gov). 🏠

## Operators CONTINUED FROM PAGE 1

It is believed that there may be a half-dozen sets of equipment associated with this particular group. Big money is at stake; individual jobs take in about \$10,000 each. Current cases under investigation by CSLB put victim losses at more than \$500,000.

The operators approach businesses and homeowners, saying they have leftover materials and can provide a deeply discounted paving service. The price quickly goes up; they take payments, cash checks, and quickly leave. The paving is done with substandard material that breaks down in a matter of days.

### What can you do to help?

Keep your eyes open for illegal operators. Contact CSLB with information about the location and, hopefully, while they are still on the job. Here are some of their identifying traits:

- Drive customized newer vehicles with out-of-state license plates
- Missing license plates, or obscured plates
- Large amounts of construction equipment parked at motels
- Use toll-free (800) telephone numbers instead of local numbers
- Suspects are often related by family and solicit door-to-door
- Come across as friendly, but can use high-pressure or scare tactics
- Demand payments in cash or immediately cash checks
- Hats, t-shirts and car stickers with names of countries from the British Isles

If you see someone matching the description of these traveling criminals, please contact SWIFT in Southern California at (562) 345-7600 or in Northern California at (916) 255-2924. 🏠

## Get Smart about Skin Cancer Prevention

*Recommended skin cancer prevention practices include wearing a wide-brimmed hard hat, long clothing, and UV-protective sunglasses; applying sunscreen (SPF 30 or higher) to exposed skin, and taking breaks under shade. The key is to place barriers between the sun and your skin.*

With the arrival of our hot, sunny California summer, construction managers and safety staff are encouraged to order a free "Sun Safety Kit for Outdoor-Based Businesses."

This kit is filled with materials to educate and encourage anyone who works outside about the ways to protect themselves from getting skin cancer.

The kit is offered by the Skin Cancer Prevention Program (SCPP), a unit within the California Department of Public Health. The kit includes fact sheets, brochures, posters, a video and other related items. One kit will serve an entire work site or facility.

A link to the kit order form is located near the top of the home page at [www.AvoidSkinCancer.com](http://www.AvoidSkinCancer.com).

Besides skin cancer, overexposure to the sun may cause cataracts, a weakened immune system, and wrinkling at an early age. Since most construction workers spend many hours exposed to sunlight each day, it's important that you give them the tools to protect themselves.

"Skin cancer, by far the most common cancer in California, is mainly caused by ultraviolet (UV) radiation from the sun," states Andrew Manthe, Chief of SCPP. "It is vital that construction supervisors integrate sun safety into the larger mix of safety

strategies they employ to safeguard their workers." Questions regarding skin cancer prevention may be directed to Mr. Manthe at [andrew.manthe@cdph.ca.gov](mailto:andrew.manthe@cdph.ca.gov). 🏠

BY JAMES A. ANDERSEN, CPA, ABV, ASA

What is a business succession plan? It is a comprehensive road map to successfully exit a privately held business either through sale, transfer to key employees, or transfer to family members. The plan that is developed needs to address all of the issues that can maximize value in a sales transaction, address a smooth transition in an employee transfer situation, and build all of the necessary stop gaps for transfer tax minimization in the family business arena.

When planning the succession of a business, whether family-owned or not, the issues to consider are some of the same issues that arise when you establish and grow a business: financial concerns and personal/family challenges. After putting forth your considerable time, energy, and financial resources, you want this business to continue in an orderly fashion, regardless of future events.

Whether the goal is to “polish the apple” and sell the business for maximum profit, transition the company to key employees in a “win-win” situation, or minimize estate and wealth transfer costs by gifting the family business to various members of the family—a business plan needs to be developed that addresses all of the above possibilities.

The following is a short checklist designed to raise your awareness of the fundamental issues associated with succession planning.

- Have you defined your personal goals and vision for the transfer of ownership and management?
- Is your successor identified, ready, and in place?
- What is the importance of family involvement in leadership and ownership of the company?
- Are you currently using techniques to mitigate or eliminate estate taxes?
- Do you have enough liquidity to avoid the forced sale of your business?
- Do you have a buy/sell agreement in place?
- Have you had your business valued lately?
- Do you have a contingency plan should you become disabled?
- Have you considered alternative corporate structures or stock transfer techniques to help you achieve your succession goals?
- Are you dependent upon your business to meet your retirement cash flow needs?

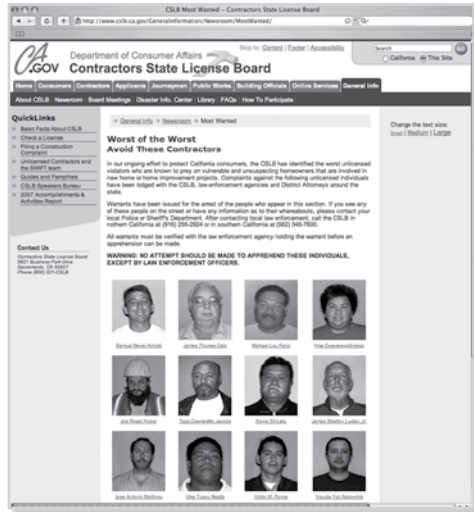

#### **Lack of a well-defined plan virtually guarantees that business owners will:**

- Exit their companies as a result of pressure from outside circumstances, not as a result of their own desires
- Exit their companies on a timetable that’s forced on them instead of one that meets their needs
- Undervalue their companies and leave hard-earned wealth on the table
- Pay too much in taxes: income taxes on a business sale and wealth transfer taxes in family-owned business situations for the parents’ estate
- Lose control over the process by being reactive and therefore limiting exit options
- Fail to realize all their business and personal goals
- Suffer unnecessary psychological stress
- Watch a lifetime of work disintegrate as a result of poor business continuity planning

On the flip side, a well-designed and implemented exit plan enables business owners to:

- Control how and when they exit
- Maximize company value in good times and bad
- Minimize and possibly eliminate income and wealth transfer taxes
- Retain control of the situation by generating a number of strategic exit options
- Reduce their stress and that of their employees and families
- Ensure continuity of the business ■

*James A. Andersen CPA, ABV, ASA is the business succession planning and exit strategies practice group leader for Andersen & Company LLP in Santa Rosa. You can reach him at [jandersen@aandco.com](mailto:jandersen@aandco.com).*

### CSLB Launches Most Wanted Web Site

The CSLB has launched a new Web site feature. "CSLB's Most Wanted" profiles the worst of the worst unlicensed operators in the state. More than one dozen people who have a criminal record and outstanding arrest warrants for crimes, including contracting without a license, appear on this list.

Information about the illegal operators will be updated regularly, with new offenders added as necessary. The CSLB warns consumers to immediately contact their local law enforcement authorities if they become aware of one of the people identified on the list.

## Air Resources Board Places New Limits on Composite Wood Emissions

Last year the California Air Resources Board (ARB) adopted a regulation that limits formaldehyde emissions from three types of composite wood products—hardwood plywood, particleboard, and medium density fiberboard. The regulation also requires that only compliant wood products be used to put together finished goods, such as cabinets, furniture, and countertops.

Formaldehyde is in many of the resins used to make composite wood products. Over time, the substance slowly leaks out into the air. That's why formaldehyde is classified as a toxic air contaminant. California is required by law to reduce formaldehyde from its air.

Formaldehyde can cause a range of serious health effects, ranging from eye, nose and respiratory irritation and the worsening of asthma to nasopharyngeal cancer (the region of the throat behind the nose).

The new regulation will be implemented in a two-phased schedule that requires increasingly stringent controls. Phase 1 will be effective on January 1, 2009, and Phase 2 will be fully implemented by 2012.

The manufacturers of composite woods, third party certifiers, fabricators, distributors, importers and retailers of composite wood products and finished goods will each be held accountable for assuring that the products they have or distribute comply with the regulations.

Contractors will be affected by this regulation in two ways: first, those who use or install composite wood products or finished goods; and second, those who deal with companies that fabricate finished goods, such as cabinets, must follow the new regulations. Contractors should be aware that their suppliers are required to provide them with materials that meet the formaldehyde emission standard. Those materials must also be labeled as meeting the standard.

Big box retailers are expected to be in full compliance by January 1, 2009. The ARB believes that all North American producers of particleboard and medium density fiberboard will be in full compliance by September 2008.

For more information please visit the Air Resources Web site: <http://www.arb.ca.gov/toxics/compwood/compwood.htm> or contact Angela Csondes at [acsondes@arb.ca.gov](mailto:acsondes@arb.ca.gov).

## New Off-Road Diesel Vehicle Requirements

A new regulation from the Air Resources Board (ARB) targets California off-road diesel vehicles and should be of interest to anyone who owns off-road vehicles, such as loaders, skid steers, scrapers, backhoes, forklifts, or airport ground support equipment. Beginning in 2009, owners will be required to report their vehicles to the ARB. Fleets will gradually have to apply exhaust retrofits that capture pollutants before they are emitted to the air, and accelerate turnover to newer, cleaner engines.

The new regulation also has two provisions that became effective on

June 15, 2008: 1) Off-road diesel vehicles are no longer allowed to idle for more than five minutes, and 2) Anyone selling an off-road diesel vehicle in California must provide written disclosure of regulation applicability to the buyer. Failure to comply with the regulation can result in fines as large as \$10,000 per vehicle, per day.

To find out more about the regulation and ARB's upcoming training sessions scheduled throughout the state, visit the Off-Road Diesel Homepage at <http://www.arb.ca.gov/msprog/ordiesel/ordiesel.htm> or contact Mr. Cory Parmer at (916) 323-1180 or [pparmer@arb.ca.gov](mailto:pparmer@arb.ca.gov).

## Construction Management Education Account

There is one short line that is often overlooked on your license application or renewal form that provides the opportunity for a voluntary contribution to the Construction Management Education Account. Behind that one line are many faces with hope and ambition.

The Construction Management Education Sponsorship Act (CMEA) was created in 1991 (Business & Professions Code Section 7139-7139.10) after state lawmakers acknowledged that university construction programs were grossly underfunded. The CMEA grants are distributed to eligible universities based on their number of construction management graduates and the funds available.

Currently, six state universities with Construction Management (CM) Programs receive funding: California State University, Chico; California Polytechnic State University, San Luis Obispo; California State University, Fresno; California State University, Long Beach; California State University, Sacramento; and California State Polytechnic University, Pomona.

The first monies (\$239,000) were distributed in 2005. Distribution of grants has taken place only once since then because of changes in the state budget process. A mechanism is being designed to dispense grants annually.

There is currently about \$392,000 in the account. The fund totally depends on voluntary contributions from licensees. Well over 80 percent comes from contractors with their license renewal applications; the remainder is from new licensees. Contributions are not tax deductible, so, funds accrue strictly from a willingness to invest in the future quality of the construction industry.

California State University, Chico receives the highest distribution since it has the largest CM program in the state (and one of the largest in the nation) with 715 students. The university received \$67,000 from CMEA in Fiscal Year (FY) 2004/05, and \$81,409 in FY 2005/06. Compared to figures in the overall university or state budget, it may seem insignificant, but it does make a difference.

CMEA grants enable students to have the latest computer systems and software.

“It has definitely improved the quality of what Chico has to offer in Construction Management,” according to Department Chair Lori Brown. “It also makes it easier to encourage interest from other funding sources when they see the contribution from contractors through the Contractors State License Board.”

The money has enabled Chico to improve classroom conditions with state-of-the-art worktables, computer systems, equipment, and better configurations to accommodate more students and improve their learning environment. It also provides students with free tutors, and computer repairs. The overall impact is a group of students who are enthusiastic about the learning process and their future careers.

In spite of the housing construction slowdown, the demand for CM graduates remains very high. The average Chico graduate receives more than three job offers. Construction companies hire virtually 100% of Chico’s graduates right out of school with an average starting salary of \$60,000. In 2007, 65 companies were competing for Chico’s 104 graduates through on-campus recruiting interviews.

These newly graduated construction managers bring with them the latest knowledge in their profession, which includes computerized plan reading, estimating, scheduling, cost control, virtual building modeling, and administration. There are also courses on Occupational Safety & Health Administration certification, and Leadership in Energy and Environmental Design Green Building Rating System accreditation for the booming green construction business.

“Highly skilled managers are a way to insure that construction remains profitable and of the highest quality,” said CSLB Board Chair James Miller. “That’s why it is so important for us to invest in young people and the industry’s future with programs like this.”

About 80 percent of CSU Chico’s CM students come from outside the Chico area, primarily from the San Francisco Bay and Sacramento areas. Many students return home after graduating to work for general contractors on such landmark projects as the Bay, Carquinez, and Benicia bridges; as well as hospitals, schools, highways, large hotels, and other commercial developments.

Learn more about the Construction Management Fund by visiting CSLB’s Web site at [www.cslb.ca.gov](http://www.cslb.ca.gov) and clicking on the “Help Build the Industry’s Future” button. ■

### EDD—Employer Tips

The Employment Development Department (EDD) has a wealth of information available to contractors and employers to make sure they’re following all state payroll tax laws. EDD also offers

no-cost seminars, either classroom-style or Web-based. To learn more, go to [www.edd.ca.gov](http://www.edd.ca.gov) and click on “Payroll Taxes.” ■

## Actions CONTINUED FROM PAGE 1

*Computers and records from the Aquarius business office were confiscated as part of the investigation.*

The CSLB and Sacramento County District Attorney’s Office investigation of Imperial Pools (dba Aquarius Pools) of Sacramento (License #267176) began after the company abruptly halted operations in August 2006, leaving more than 60 families with partially completed swimming pools. CSLB received initial complaints and inquires from homeowners and subcontractors who filed more than 60 mechanic’s liens against the homeowners for unpaid work.

The Wolfes were managing the company and its day-to-day operations when it became financially insolvent and shut its doors.

Owners Kevin Towle and Richard Carnation were in the process of selling the company to Greg Wolfe. Mr. Wolfe was listed as Responsible Managing Officer (RMO), Chief Executive Officer (CEO) and President on the Aquarius license. The company filed for bankruptcy in 2007.

The Wolfes are charged with using the company’s assets for personal gain. A forensic accountant conducted an analysis of various bank accounts and determined that between January 2004 and August 2006, the couple diverted Aquarius Pools assets through fraudulent payroll and business expenses, purchases of personal items, vacations, vehicles, and personal expenses.

The analysis also showed that some of the money diverted by the Wolfes was from customers who were left without completed projects.

The CSLB obtained a Default Decision and Order that revoked the license of Aquarius Pools, effective July 25, 2008. Greg Wolfe, the RMO of Aquarius Pools, is prohibited from applying for or serving as an officer, director, associate, partner, or qualifying individual on another contractor’s license

for 3 years. In a stipulated settlement, one of the owners, Richard Carnation, agreed to disassociate from the license of Waterworks Industries (#678182). That company will be allowed to continue to operate. Carnation also agreed to the revocation of his sole ownership license for Town and Country Construction (#813098). The other owner, Kevin Towle, agreed to disassociate from the license of Water Works Aquatic (#826855). That company will be allowed to continue to operate. Towle also agreed to the revocation of his sole ownership license for Redhill Construction (#697459).

CSLB worked closely with the California Spa and Pool Industry Education Council (SPEC) to help the families harmed in the Aquarius bankruptcy. SPEC gathered a group of licensed contractors to step in and finish up the jobs. Many victims utilized this and all homeowners now have finished pools.

The majority of mechanic’s liens have also been settled. CSLB is not aware of any subcontractor that went out of business as a result of the Aquarius bankruptcy. ■

## Did You Know?

CSLB has formal reciprocity agreements with the contractor licensing agencies in Arizona, Nevada, and Utah. That means licensed California contractors have an easier time getting a license to do business in those states. Go to [www.cslb.ca.gov](http://www.cslb.ca.gov) and click on “Contractors” to learn more.

## Decision CONTINUED FROM PAGE 1

not acting in the capacity of a contractor because he simply was a “coach” for owner-builders who wanted to build a pool.

The Administrative Law Judge (ALJ) who presided over the hearing upheld the CSLB citation, stating that the man’s attempt to use semantics in his defense was fruitless. The decision stated that, “The sting operation established that the respondent acted as a ‘consultant’ to an owner-builder. Since “consultants are deemed ‘contractors,’ respondent acted as a ‘contractor’ within the meaning of the Business and Professions Code Sections 7026 and 7026.1, and was correctly cited by the Board...”

The ALJ described a number of tasks in this case that were important in determining that the service offered by Mr. Sage was that of a “consultant.” They included:

- Organizing specialty contractors with whom he had ongoing business relationships and obtaining quotes from them;
- Vouching for the integrity and quality of the work of the specialty contractors;

- Scheduling the sequencing of the specialty contractors’ work; and
- Monitoring specialty contractor progress throughout all construction phases.

Another important factor that played a part in the decision was information on Mr. Sage’s business card indicating that he was in the pool construction business. The decision is significant because it establishes a guide that can be used for future cases to determine whether an individual has acted as a consultant to an owner-builder and should have been licensed.

For these reasons, the decision has been assigned “precedential” status. As stated in Government Code Section 11425.60: “An agency may designate as a precedent decision a decision or part of a decision that contains a significant legal or policy determination of general application that is likely to recur.” Read the entire precedential decision on the CSLB Web site: <http://www.cslb.ca.gov/GeneralInformation/Library/Laws/PrecedentDecisions.asp> ■

## In the Spotlight: Workers' Compensation Insurance

### **Q: Do I need to have workers' compensation insurance?**

**A:** Yes, California law requires licensed contractors to have workers' compensation insurance if they have even one employee, even if it's just temporary employment. You're also required to have workers' compensation insurance if you have a roofing specialty license (C-39), even if you don't have any employees. You must have on file with CSLB a Certificate of Workers' Compensation Insurance or be covered by a Certificate of Self-Insurance issued by the Director of Industrial Relations (DIR). Or, you must file an "Exemption from Workers' Compensation" form.

### **Q: Where do I get workers' compensation insurance?**

**A:** You can purchase workers' compensation insurance coverage through an agent or a broker from any of the privately licensed insurers authorized to write policies in California. You can find a list of authorized insurers on the Department of Insurance Web site ([www.insurance.ca.gov](http://www.insurance.ca.gov)).

If you can't find an insurer willing to cover your business, the State Compensation Insurance Fund ([www.scif.com](http://www.scif.com)) is required to provide you with coverage. If you belong to a trade association you might want to check with it first—some trade groups negotiate special rates for members. Your local chamber of commerce may also be a source of good advice.

### **Q: How much does workers' compensation insurance cost?**

**A:** Workers' compensation insurance premium rates are not regulated by the state. While the Workers' Compensation Insurance Rating Bureau—the licensed statistical agent for the state insurance commissioner—issues recommended rates and carriers must file their rates with the Department of Insurance, rates can vary from carrier to carrier. Like any good consumer, you should shop around for a carrier that best meets your needs. Cost is one consideration, but there are other factors to look at: the services provided, ease of access to the claims adjusters, their familiarity with your industry, etc. If you have a broker or agent, he or she should be able to give you expert guidance.

### **Q: Can my employees help pay for my workers' compensation insurance?**

**A:** No. Workers' compensation insurance is part of the cost of doing business. An employer cannot ask employees to help pay for the insurance premium.

### **Q: What happens if I'm uninsured and an employee is injured?**

**A:** Failing to have workers' compensation coverage is a criminal offense. Section 3700.5 of the California Labor Code makes it a misdemeanor punishable by either a fine of up to \$10,000 or imprisonment in the county jail for up to one year, or both. Additionally, the state issues penalties of up to \$100,000 against illegally uninsured employers.

If an employee gets hurt or sick because of work and you are not insured, you are responsible for paying all bills related to the injury or illness. If you are illegally uninsured and an employee gets sick or hurt because of work, that employee can file a civil action against you in addition to filing a workers' compensation claim.

### **Q: Can I be fined for not carrying workers' compensation insurance?**

**A:** Yes, and more. If the Division of Labor Standards Enforcement (DLSE) determines that an employer is operating without workers' compensation coverage, a stop order will be issued. This order prohibits the use of employee labor until coverage is obtained, and failure to observe it is a misdemeanor punishable by imprisonment in the county jail for up to 60 days, or by a fine of up to \$10,000, or both. DLSE will also assess a penalty of \$1,000 per employee on the payroll at the time the stop order is issued and served, up to \$100,000 [Labor Code section 3722(a)].

Failure to secure workers' compensation insurance is a misdemeanor punishable by imprisonment in the county jail for up to one year, or by a fine of up to ten-thousand dollars (\$10,000) or by both imprisonment and fine. CSLB can also issue administrative citations based on violations of Labor Code Section 3700.5.

In addition, if an injured worker files a workers' compensation claim that goes before the Workers' Compensation Appeals Board and a judge finds the employer had not secured insurance as required by law, when the dispute is resolved the uninsured employer may be assessed a penalty of \$10,000 per employee on the payroll at the time of injury if the worker's case was found to be compensable, or \$2,000 per employee on the payroll at the time of injury if the worker's case was non-compensable, up to a maximum of \$100,000 [Labor Code section 3722(b)].

Campaign to Recruit Apprentices Begins

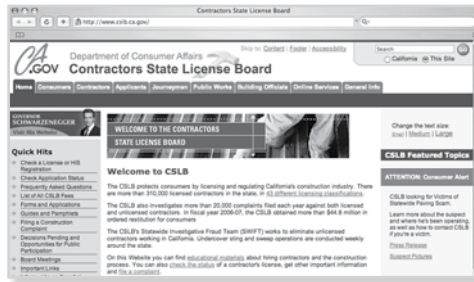

In March 2008, Governor Arnold Schwarzenegger launched a new campaign to recruit apprentices for public works projects funded by bonds that will help California rebuild its infrastructure and keep the economy growing.

The "I Built It" public awareness/education campaign urges anyone interested in high-wage careers in the building trades to follow the age-old "earn while you learn" apprenticeship path, which combines on-the-job training with classroom instruction.

An estimated 200,000 new apprentices will be needed over the next 10-12 years. Within the next six years, California will need:

- More than 73,000 carpenters who will earn a median wage of \$23 per hour
• 25,000 plumbers, pipe fitters, steamfitters, and electricians who will earn a median wage of \$22-\$23 per hour
• 15,000 operating engineers who will earn a median wage of more than \$27 per hour

There is also a need for licensed contractors in several other construction classifications. For more information about California apprenticeship programs, visit www.dir.ca.gov/das.

CSLB Web Site Has New Look

Have you visited the CSLB Web site lately? It has a whole new look and new features to help make it easier for you to get the information you want. Visit www.cslb.ca.gov.

Industry Working Hard to Attract New Workers

More than 1,400 young people got the chance to climb rock walls, ride around on heavy equipment, and see what a great career the construction industry can provide.

The 8th Annual Greater Sacramento Construction Career Awareness day was held on April 17. High school and community college students, along with parents and teachers, got a chance to learn, first-hand, about career planning, job classifications, scholarships, and salary information.

Industry officials estimate that 300,000 new workers will be needed by 2012 to fill the labor demand in California on upcoming infrastructure projects. It is hoped that events like this will draw more young people into the trades.

CSLB Board Member Matt Kelly, who is also Executive Secretary Treasurer of the Sacramento Sierra's Building and Construction Trades Council, and his crew, aided by volunteers from the fire department, prepared a barbeque for the future construction workers.

Events like this are an important tool to attract new workers. The average age nationwide for workers in the skilled trades, according to government and industry figures, is 48. Many of the current construction workers are getting ready to retire. It is estimated that for every four people who leave the trades, only one new trained person is supplied under current apprenticeship programs.
