

CONTRACTORS STATE LICENSE BOARD LICENSE EXAMINATION STUDY GUIDE

WARM-AIR HEATING, VENTILATING AND AIR-CONDITIONING (C-20)

Content of the Examination

The Warm-Air Heating, Ventilating and Air-Conditioning (C-20) Examination is divided into four major sections:

1. Planning and Estimating (25%)

- HVAC system design and evaluation
- Load and psychrometric calculations
- Duct system design and layout
- Job cost estimation

2. Fabrication, Installation, and Startup (29%)

- Duct system fabrication
- Equipment installation
- Electrical and mechanical components
- Plumbing and refrigeration components
- Air distribution and duct systems
- HVAC system startup

3. Troubleshooting, Repair, and Maintenance (24%)

- HVAC system diagnostic tests and evaluation
- HVAC system maintenance and repair

4. Safety (22%)

- Personal protective equipment (PPE)
- Job site safety requirements (Cal/OSHA)
- Handling hazardous materials

Percentages are approximate

Test Site Policy

This is a closed-book examination. No reference materials may be used during the examination. All materials brought to the examination site must be left in an unmonitored area at your own risk.

Test Strategy

This is a multiple-choice examination with four choices per question. Examination questions are written to provide only one BEST answer. Some questions require mathematical computation. A calculator will be provided.

There is no penalty for guessing. If you are unsure about a particular question, it is better to try to answer the question than to leave the question blank.

Plenty of time is provided to answer all examination questions, so be sure to read each question and its four choices completely and carefully before selecting the BEST possible answer to the question.

Sample Questions

Below are three typical examination questions. The correct answer is marked with an asterisk (*).

1. If an air conditioner has 2,400 watts of electrical input and 24,000 BTU/h of cooling, what is the EER of this system?
 - a. 2.4
 - b. 9.0
 - c. 10.0*
 - d. 12.0
2. What is the function of a thermocouple in a gas furnace?
 - a. It is a safety control for the fan.
 - b. It is a safety device that confirms the existence of a pilot flame.*
 - c. It is a safety device for electronic ignition systems.
 - d. It is a safety device that controls the thermostat.

3. A packaged water source heat pump eliminates which of the following components?

- a. Capacitor
- b. Evaporator
- c. Reversing valve
- d. Air-cooled condenser*

All questions are written and reviewed by licensed contractors who are actively working in the trade
